

I am a paying subscriber to XM Satellite Radio, and find the weather and traffic channels, to be an absolute necessity in my profession. I am an over-the-road truck driver, traveling to the East Coast weekly, and need the information I am getting from these channels, to allow me to plan the appropriate route to take, and also to inform my dispatch and the customers of any delays I may encounter on the way, due to weather, or traffic conditions. I feel that this attempt by the Radio Broadcasters to eliminate these channels from Satellite Radio, is not warranted, and is an absolute necessity for drivers in my profession.
